

Approved For Release 2001/08/02 : CIA-RDP78-02820A001300050001-1

UNITED STATES GOVERNMENT

Memorandum

TO : Director of Communications

DATE: 15 NOV 1967

FROM : Chief, Engineering Staff, OC

SUBJECT: Engineering Staff Monthly Report for October 1967

1. Our Cooperative Student Program at the R&D Laboratory was initiated in 1962 as an "experiment", though one which we recognized as a fairly long-term commitment. One aspect of the program was its probable value as a recruitment device - as it turns out, a successful one. Seven students completed academic work this summer, and of these, three elected to come with the Agency. Only one is with the R&D Laboratory due to slotting limitations; one is with R&D External Projects, and one is with SPS. All were brought on at the GSS-09 grade level because of their work experience at the Laboratory between school terms. Our batting average looks even better considering that the four graduates who did not come with us are undertaking advanced studies and are not yet available for employment.

2. MAX-III delivery for installation at Langley is still indefinite with February 1968 a possibility. We are pressing [REDACTED] for a "management" statement on delivery prospects. STATINTL
